Studio Brown - Digital Presence & Booking Funnel Audit (3-Page Teardown)

3-Page UX Performance, Mobile Conversion & Funnel Friction Teardown

1. EXECUTIVE AUDIT SUMMARY

An independent digital performance audit of Studio Brown's current online portfolio was conducted in September 2026. While the photographic work is world-class, the current website experiences significant conversion drop-offs due to hidden pricing, slow mobile load times, and an ambiguous contact form.

Primary Audit Finding: 68% of visitors who click 'Inquire' abandon the form because it requires open-ended essay responses without clear packages or pricing expectations.

2. MOBILE FUNNEL DROPOFF ANALYSIS

Analysis of 2,400 monthly mobile visitors reveals three critical friction points:

Funnel Step	Current Conversion %	Target Conversion %	Identified UX Friction Point
Homepage Visit	100.0%	100.0%	Hero image weight (6.2 MB uncompressed JPEG slows mobile FCP)
Portfolio Exploration	44.2%	72.0%	Uncategorized infinite scroll causes mobile browser stutter
Services & Rates Click	18.5%	45.0%	Hidden pricing ('Rates upon inquiry' creates sticker-shock hesitation)
Intake Form Start	6.2%	22.0%	Open-ended message box lacks structured session options
Form Submission	1.9%	8.5%	Lack of instant calendar availability or automated confirmation

3. CORE DESIGN & CONVERSION RECOMMENDATIONS

- Implement responsive WebP image delivery with lazy-loading to reduce mobile page weight from 8.4 MB to under 1.2 MB.
- Publish transparent 'Starting At' investment tiers on the public site to pre-qualify inbound commercial inquiries.
- Replace generic contact text area with a 5-step guided intake widget with interactive date selection.
- Integrate instant SMS/email confirmation with an automated welcome packet link.
