HubSpot CRM Lead-Routing & Deal Stage Specification — Jack Johnson

Enterprise CRM Pipeline Architecture, Lead Routing Rules & Forecasting Formulas

1. AUTOMATED GEOGRAPHIC & FLEET TERRITORY ROUTING

Inbound leads generated via website scoping forms and cold outbound sequences route round-robin to Account Executives based on two gating criteria: Facility Bay Count and Regional Freight Hub.

- Mid-Market Tier (5–20 bays): Routed to Regional Account Executives within 15 minutes of form completion.
- Enterprise Tier (20+ bays or multi-terminal portfolios): Routed exclusively to Co-Founders with automated VIP calendar scheduling.

2. 5-STAGE DEAL PIPELINE DEFINITIONS & EXIT CRITERIA

Stage 1: Lead Qualified — Verified terminal location, 10+ daily trailers inbound, operations/shipping supervisor identified.

Stage 2: Technical Terminal Scoping — Current WMS/TMS identified (SAP, Oracle, Blue Yonder), average dock dwell time documented, 20-min demo completed.

Stage 3: Proposal & ROI Business Case — Customized detention savings model presented, Standard vs Enterprise tier selected.

Stage 4: Pilot Agreement & Bay Mapping — Security/SOC2 review passed, pilot facility bays mapped, 14-day deployment MSA executed.

Stage 5: Closed Won — Terminal go-live date locked, dispatcher kickoff training scheduled, billing cycle activated.

3. STALE DEAL AUTOMATION & SLA ENFORCEMENT

Any opportunity remaining in Discovery or Technical Scoping without activity for greater than 7 business days automatically triggers a manager notification and enrollment into a 3-touch nurture email sequence.

4. WEIGHTED REVENUE RECONCILIATION & FORECASTING

Probability coefficients: Discovery (15%), Scoping (40%), Proposal (70%), Pilot (90%), Closed Won (100%). Weighted pipeline accurately forecasts quarterly software ARR.
